

Quick Attach Couplers

The solution to increased productivity with added compact excavator versatility and less down time. EDGE Quick Attach Coupler Systems allow your equipment to quickly change multiple attachments for different uses.

Coupler systems feature T-1 steel in all critical wear components. Safety features are incorporated in coupler designs to assure positive hook up. All coupler systems feature hardened bushings in all pivot points.

Spring Loaded Quick-Coupler

T-1 steel used in all critical and high wear components. Coupler is manually released from attachments.

- Change attachments quickly
- Hardened bushings utilized in all pivots
- Fail safe safety pin and adjustable springs
- Works with all buckets made to OEM spec
- Easily replaceable springs and components
- Includes an additional set of bucket pins

Hydraulic Quick-Coupler

Simply hook it up, install the safety lock pin and engage the hydraulic cylinder. The spring in this quick attach ensures that the bucket or other attachment stays on, even if hydraulic pressure drops.

- Ability to change attachments with ease
- Hardened bushings are utilized in all pivots
- Fail safe safety pin
- Easy access cylinder and adjustable springs
- Hydraulic kit included
- Works with all buckets made to OEM spec
- Includes an additional set of bucket pins
